Received and published: 9 July 2010

Dear Dr. Elguindi, I would like you to encourage you to submit a revised version of your manuscript that takes into account the reviewers' comments. In particular the manuscript should be made more relevant to GMD by describing better the model and the data assimilation procedure, and how the data assimilation capability can help in validating / developing the model. With best regards, PS: note that I cannot read properly the revised version of the manuscript that you have submitted as the version available on the GMD web site appears to be corrupted. In any case please consider my message above before resubmitting. With best regards, Olivier Boucher
