

Figure S2.1. Normalized d_0 distances between simulated air temperature curves (data shown in Fig. 1a) of randomly selected model and other models in dependence on amount of smoothing. Starting values represent d_0 distances between original curves, values at the end represent d_0 distances for oversmoothed data. The vertical line depicts the amount of smoothing used in the presented study.

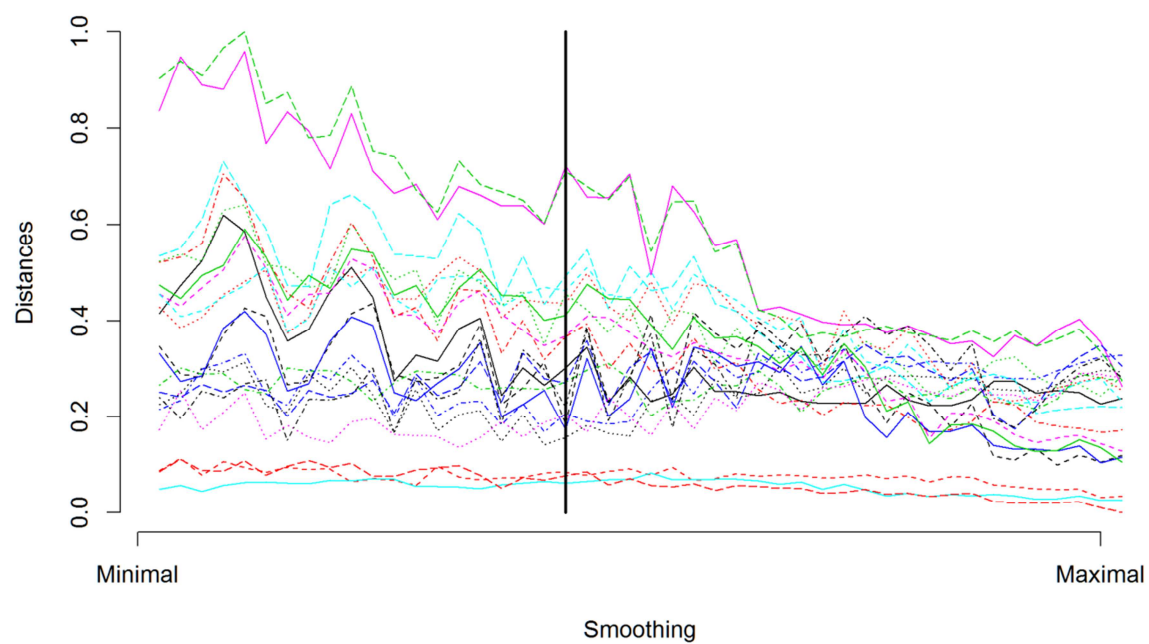

Figure S2.2. The same as Fig. S2.1, but for distances d_1 .
